Full-Stack Software Engineer (TypeScript / React / Node) building AI-integrated web products

SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React, Next.js, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, TypeScript, Microservices, REST API Development, Authentication (JWT), CRUD Operations

AI Integration: Gemini API, LLM-based automation, prompt-driven workflows

Database & Services: MongoDB (basic), Supabase

Tools & Testing: Git, GitHub, Unit Testing, Chrome Extension APIs

Languages: English (Fluent), Arabic (Fluent)

EXPERIENCE

Software Engineering Intern | GB & MA

Jul 2026 – Sep 2026

HMS (Hospital Management System)

- Develop and maintain backend features for a Hospital Management System using TypeScript-based microservices, building REST API endpoints and database logic that support core hospital operations.
- Collaborate with the frontend team to connect UI components to backend services, contributing directly to frontend implementation as needed.
- Participate in technical discussions on system architecture and data flow as the platform grows in scope.

PROJECTS

TalentScreen – AI-Powered HR Recruitment Platform

Apr 2026 – May 2026

React.js, Node.js, TypeScript, Gemini API, Redux Toolkit, Tailwind CSS, shadcn/ui | Umurava Hackathon

- Built a full-stack AI recruitment platform enabling recruiters to create job postings, bulk-upload candidates (CSV, JSON, XLSX, PDF), and receive AI-ranked shortlists with per-candidate reasoning.
- Integrated Google Gemini 2.5 Flash to automate CV extraction and candidate screening, cutting manual shortlisting time by up to 80%.
- Led frontend development across the full recruiter workflow, from job posting creation to the ranked candidate review interface.

Personal Link Vault – Chrome Extension & Web App

Feb 2026

React, Node.js, Express, Supabase, Chrome Extension APIs

- Built a Chrome extension that captures browser links in real time, categorizes them automatically, and syncs them to a companion web app.
- Designed REST API routes for full CRUD on categorized link data, backed by Supabase with row-level security for per-user data isolation.
- Integrated the React frontend with the Express backend to render and filter saved links dynamically.

Web-Based Browser Game

Jan 2026 – Feb 2026

HTML, CSS, JavaScript | Game Jam Hackathon — 48-hour deadline

- Delivered a fully functional browser game within a 48-hour hackathon deadline, implementing game logic, collision detection, and score tracking using vanilla JavaScript and DOM manipulation.
- Led frontend development and task delegation across the team, making scope and prioritization calls under time pressure.
- Built responsive game mechanics that functioned across desktop screen sizes without a framework.

EDUCATION

University of Lay Adventists of Kigali (UNILAK)

Bachelor's Degree in Software Engineering — Expected 2028
